

Digiway + Install and Application Suitability Questionnaire

Ensure installation will be compliant to EN16005 regarding safety

1. Is the door width **1.2m** or less?
2. Is the door under **120kg**?
3. Can the door swing freely, i.e. no closing system fitted in frame, floor or jamb. No detents?
4. Is there 100mm above the door?
5. If inward opening, is the door face flush the header i.e. the door is not recessed?
6. If outward opening is the reveal depth 195mm or less?

If answers to the above are **all** yes, then the Digiway will fit, if **no** then a heavier duty unit will be required, except point 5 where all units require a flush fitment.

However, please factor in the usage/application as follows:

1. Is the door going to be in a busy thoroughfare? i.e. a school entrance.
2. Is the door to be predominately used by able bodied people in a busy thoroughfare?

If the answers are yes to either of the above questions then a heavier duty unit **may** be required

• Use conditions

Zone A : Very intense use : 600 cycles / day

Zone B : Intense use : 200-300 cycles / day

Zone C : Use at reduced speed

Zone D : Not allowed
